Openzeppelin

Re: Full Stack Ethereum Developer

To whom it may concern,

I am an admirer of Openzeppelin, as a leader in cybersecurity that offers the most trusted open-source library that helps blockchain developers to build decentralized applications. This inspires me to join a team that helps the entire blockchain community to learn, innovate, and create a highly engaging environment.

It is with great interest that I submit my rsum for the Full Stack Ethereum Developer position with Openzeppelin. I have had a variety of personal project that has provided me an expertise and knowledge about Smart Contract Development and Testing, Vulnerability Checking, and Front End integration. In the past 6 months, I have built several Decentralized Applications including an NFT Marketplace, and an Off-Chain Voting platform for my personal project, LennyVerse. Moreover, I was able to create a smart contract called "Community IDO, which helps developers to launch a decentralized project safely by controlling the liquidity released through time. I am a rigorous person that continues to expand my knowledge and always has a passion for learning. For this reason, I have self-taught myself several skills such as, the famous vulnerabilities that smart contracts could face and how to overcome problems with the help of Slither and MythX.

As a junior Data Scientist at the Development Bank of Canada, I learned how to communicate with all the members of a team and make sure that each one of them understands the technology we are developing. Also during my experience at BDC, I participated into the development of several Machine and Deep Learning models and created the production pipeline to served them. I also was a teacher assistant for the class Advanced Topics in Information Systems in the MMA program at McGill, and this experience improved my capability to share my knowledge on complex topics.

I am confident that you will find me to be an exceptional and enthusiastic member of your team. I am eager to meet with you and discuss my achievements and how I can benefit your company and the entire blockchain industry. Please do not hesitate to contact me. Your consideration and response are very much appreciated.

Sincerely,

Arii Sichoix
